What is an E1 Notification – Telecom?

An E1 Notification is an SAP repair notification created to document an issue, problem, request or feedback against a piece of equipment. It is a commonly used by TDBU Apparatus, who will be performing the actual radio inspection and/or replacement. Additionally, E1 Notifications allow some back-end automation which streamlines some accounting functionality.

When do I create an E1 Notification?

An E1 Notification is created whenever a Telecom radio failure is detected or if a Telecom radio is non-responsive.

Who Does the Repair or Replacement?

The TDBU Apparatus Group monitors Telecom's E1 Notification requests, flips them into work orders, and assigns the work to the field crew responsible. The following diagram shows the typical work flow for a Telecom E1 Notification.

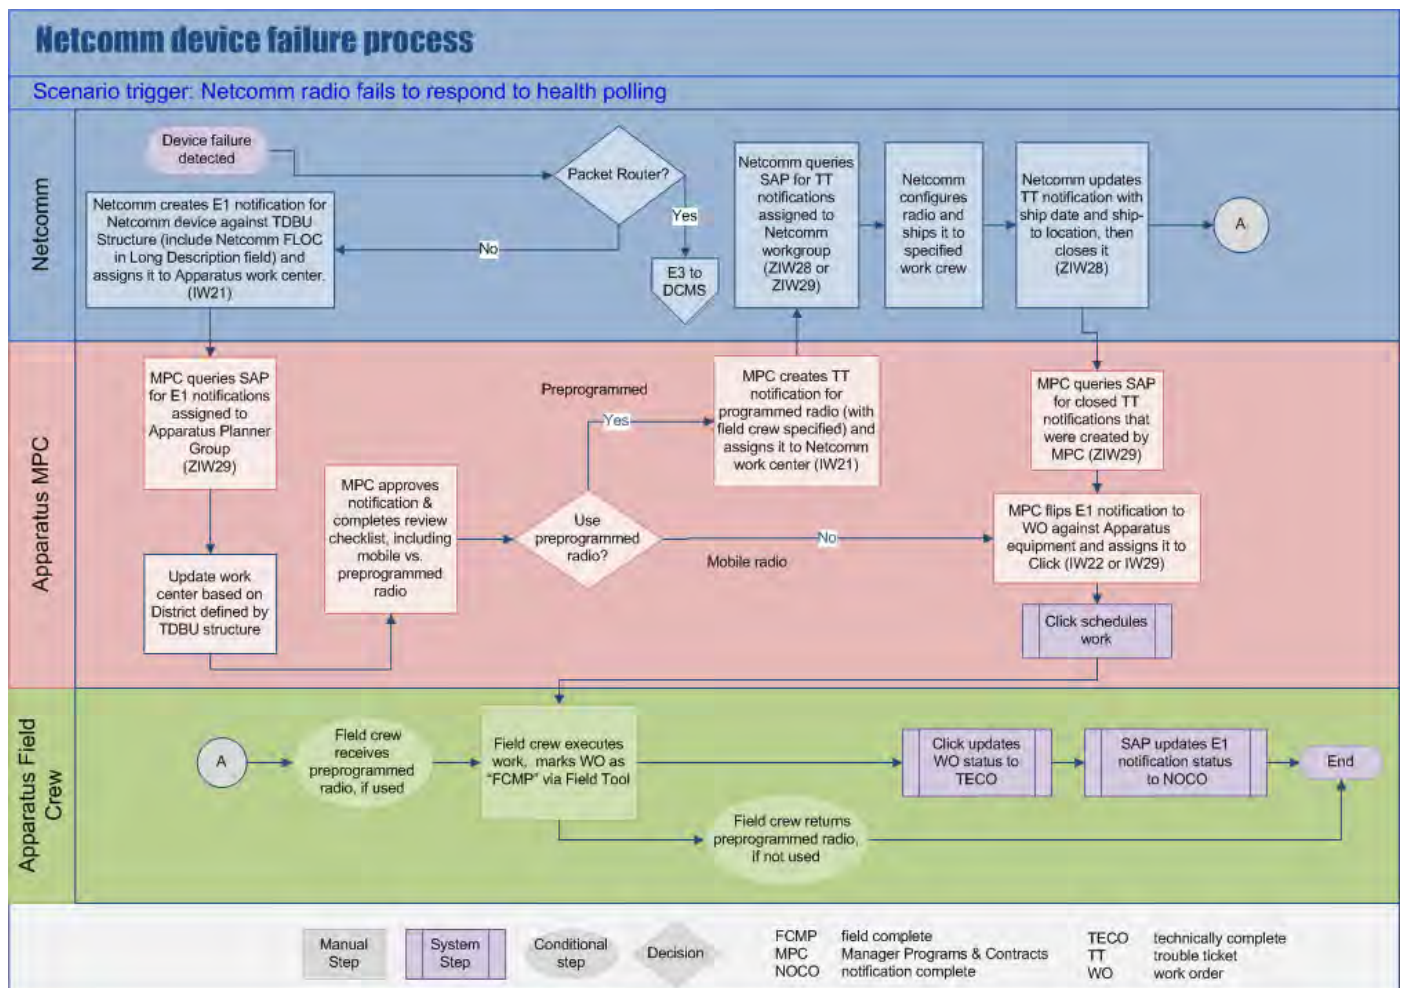

Figure 1: Telecom E1 Notification Workflow

This QRM describes the initial creation of E1 Notification using Transaction Code IW21, which is identified in the 1st task box in the top row (Netcomm) – see figure 1. The rest of the work flow is shown only to help you understand what is involved and who is responsible.

Working with E1 Notifications

This QRM will help you search for and display, create, change, cancel, and print an E1 Notification and also attach a file to one, if needed. This QRM presumes that you have a basic understanding of SAP login and navigation procedures. You must also have been assigned one or more of the following SAP roles:

- EAM – All Displayer – IW23, IW69
- EAM – IT/Telecom Interface Maintainer – ZPMNCMFL
- EAM – Notifications Approver – IW22, IW68
- EAM – Notifications Creator – IW21

E1 Transaction Codes

The following transaction codes are used when working with E1 Notifications:

| Activity | Transaction Code | Required Role | External Work Instruction |
|--|------------------|---|---|
| Create Notification | IW21 | EAM – Notifications Creator | 3-F-005-030-010_02-IW21 E1 – Priority 1, 2, 3 Repair |
| Display Notification | IW23 | EAM – All Displayer | 3-F-005-040-032-IW23 Display PM Notification |
| Print Notification | IW22 IW23 | EAM – Notifications Approver EAM – All Displayer | 3-F-005-040-090-IW22 Print Substation Notifications |
| Update Notification | IW22 | EAM – Notifications Approver | 3-F-005-030-014_01-IW22 E1 - Completion |
| Search Notification | IW68 IW69 | EAM – Notifications Approver EAM – All Displayer | 3-F-005-090-015_IW69 Notification List/Edit. |
| Cancel Notification | IW22 | EAM – Notifications Approver | 3-F-005-050-020-IW22 Notification Cancellation |
| Notification Attachments | IW22 | EAM – Notifications Approver | 3-F-005-030-030-IW22 Notification Attachments |
| Transfer Telecom Notifications | ZPMNCMFL | EAM – IT/Telecom Interface Maintainer | 3-F-005-090-040 Maintenance Updates to NETCOMM |

Figure 2: E1 Transaction Codes

Problem Statements

The creation of E1 Notifications is only possible if you can successfully create a viable Problem Statement recognized by SAP. The steps in this QRM will guide you through the various sections of the E1 Notification screens and help you build a successful Problem Statement.

Problem Statement Matrix

The following table of values comprises the key components of successful Problem Statements. Since E1 Notifications for Telecom are written against TDBU Equipment, the key element is the TDBU Object Type in the first column. Once you have identified which Object Type you are dealing with, stay on that row to help select the appropriate responses as required by the associated Steps throughout the QRM.

| Object Type | Object Type Description | Object Part / Description | Elevation | Condition / Description | Action Required / Description |
|-------------|--------------------------------|---------------------------|-------------------------------|-------------------------|---|
| ED_POLE | Distribution Pole | 0057 / Radio | Distribution Secondary - 0012 | 0049 / Netcomm | 0028 Inspect 0030 Install 0042 Remove 0046 Replace |
| EZ_POLE | Distribution/Transmission Pole | 0057 / Radio | Distribution Secondary - 0012 | 0049 / Netcomm | 0028 Inspect 0030 Install 0042 Remove 0046 Replace |
| ET_POLE | Transmission Pole | 0057 / Radio | Distribution Secondary - 0012 | 0049 / Netcomm | 0028 Inspect 0030 Install 0042 Remove 0046 Replace |
| ED_SL | Distribution Stlt | 0057 / Radio | Distribution Secondary - 0012 | 0049 / Netcomm | 0028 Inspect 0030 Install 0042 Remove 0046 Replace |
| ET_TOWER | Transmission Tower | 0057 / Radio | Distribution Secondary - 0012 | 0049 / Netcomm | 0028 Inspect 0030 Install 0042 Remove 0046 Replace |
| ED_VAULT | Distribution Vault | 0057 / Radio | Subsurface - 0018 | 0049 / Netcomm | 0028 Inspect 0030 Install 0042 Remove 0046 Replace |
| ED_HH | Distribution HH | 0057 / Radio | Subsurface - 0018 | 0049 / Netcomm | 0028 Inspect 0030 Install 0042 Remove 0046 Replace |
| ED_PAD | Distribution Pad | 0057 / Radio | Subsurface - 0018 | 0049 / Netcomm | 0028 Inspect 0030 Install 0042 Remove 0046 Replace |
| ED_FCB | Fuse Cabinet | 0057 / Radio | Subsurface - 0018 | 0049 / Netcomm | 0028 Inspect 0030 Install 0042 Remove 0046 Replace |
| ED_ENCLOS | Distribution Enclos | 0057 / Radio | Subsurface - 0018 | 0049 / Netcomm | 0028 Inspect 0030 Install 0042 Remove 0046 Replace |

Figure 3: Problem Statement Matrix

Create an E1 Notification

If a Telecom Radio fails to respond, the Radio must be inspected to discover the problem and fix or replace the Radio.

TDBU Apparatus Group is responsible for visiting the Radio location and performing the repair. Since TDBU uses E1 Notifications as their primary method of communicating problem information and tracking status and completions, Telecom will use E1 Notifications to communicate Radio problems with TDBU Apparatus.

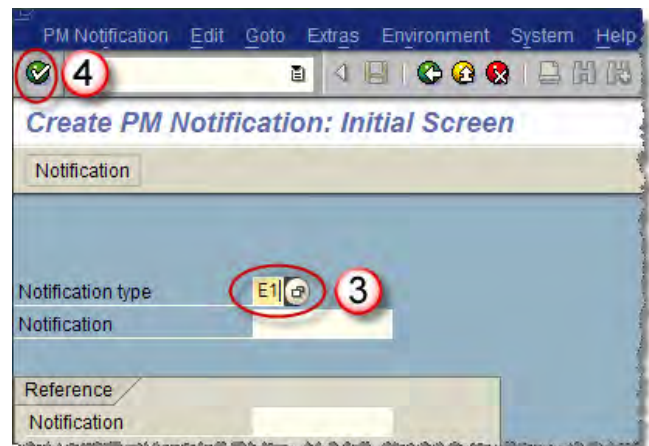

1. Log into SAP and enter transaction code **IW21** to access the **Initial Screen** for creating Notifications.

2. Click .

3. Enter **E1** in the **Notification type** field.

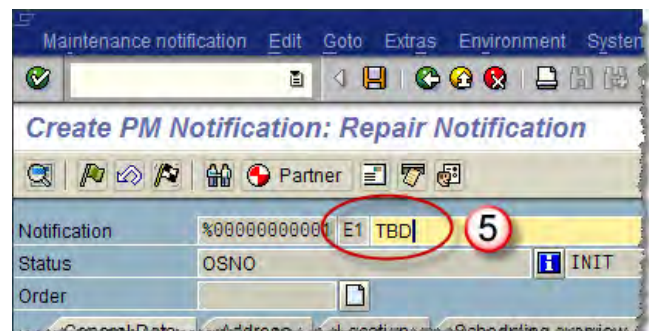

4. Click .

5. Enter **TBD** in the third **Notification** field.

Although this field is required, enter a temporary value, such as TBD, because the contents will be overwritten with the standardized Problem Statement when the notification is saved.

Continued on the next page.

Functional Location (FLOC)

In order for E1 Notifications to work correctly, the notification must be created against a TDBU FLOC and TDBU Equipment.

- If you have the TDBU FLOC, go to Step 13 to enter the TDBU FLOC and Equipment identifier.
- If all you have is the Telecom Functional Location of the Radio, you can find the TDBU Functional Location by performing the following steps.

6. Enter the Telecom Radio FLOC in the **Functional loc** field.

DO NOT PRESS ENTER!

Pressing **Enter** validates the Telecom FLOC as the Notification location. The Notification location must be a TDBU FLOC. Pressing **Enter** will generate an error message at Step 7.

7. Click .

The **Object Information** window for the Telecom FLOC will display if the Telecom Radio has had any previous Notifications issued against it.

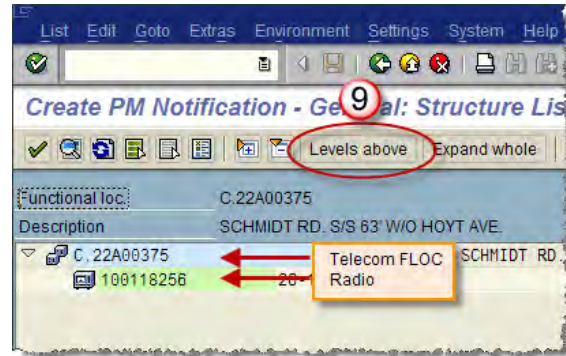

If you do not see this window, this is the first Notification issued against this piece of equipment.

8. Click .

Continued on the next page.

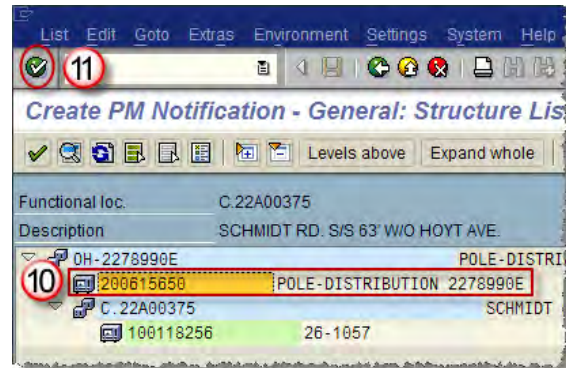

The Telecom FLOC is displayed with the Radio Equipment shown directly below it.

9. Click on **Levels above** to expand the listing.

The TDBU FLOC is displayed with the TDBU Pole Equipment directly below it.

10. Click on the TDBU Equipment identifier.
11. Click  to change the **Functional loc** and the **Equipment** in the Notification.

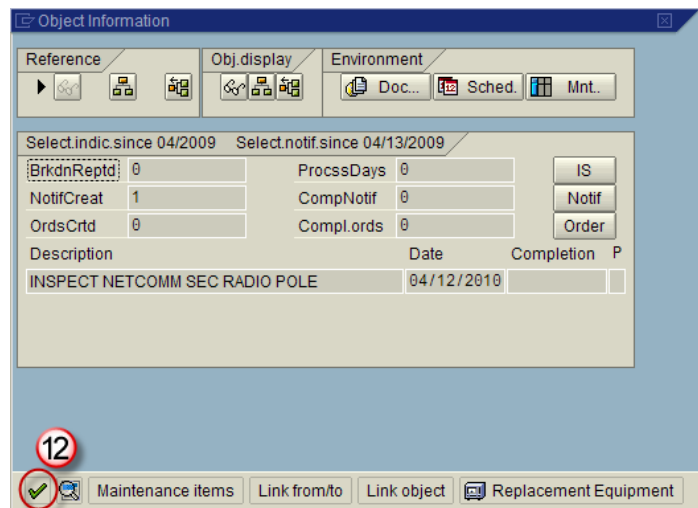

The **Object Information** window for the TDBU Equipment will display if the Equipment has had any previous Notifications issued against it.

If you do not see this window, this is the first Notification issued against this piece of equipment.

12. Click .

Continued on the next page.

The **TDBU FLOC** and **TDBU Equipment** replace the Telecom FLOC in the Notification.

13. Double-click on the **Equipment** identifier to display more information.

Notice that the Equipment description displays **POLE-DISTRIBUTION xxxxxxxx**. This is a key identifier that will help ensure that the E1 Notification is completed correctly.

The **Display Equipment: General Data** screen for the TDBU pole is displayed.

14. Notice that the **Object type** is **ED_POLE**. This **Object type** is critical to creating the correct Problem Statement.

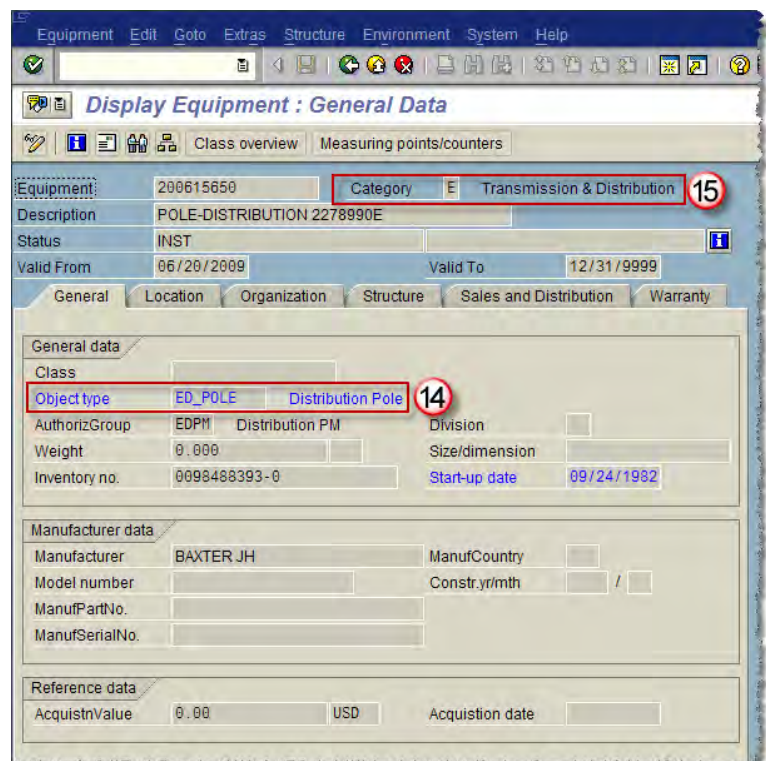

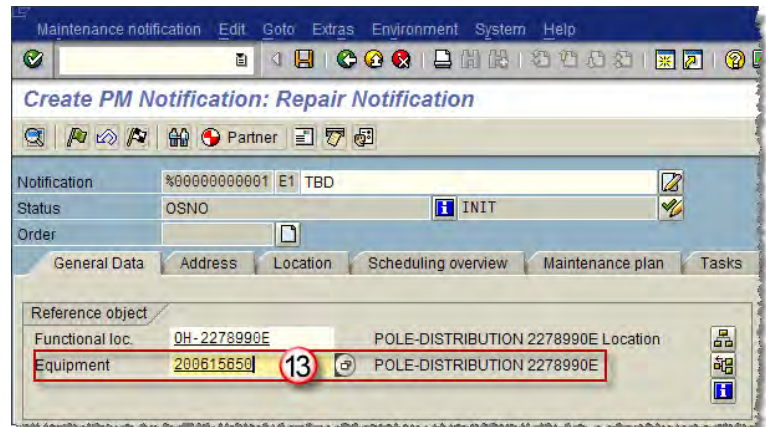

Be sure to match the **Object type** to the correct **Elevation**. (See the *Problem Statement Matrix* on page 3 for more information.)

15. Notice that the general category of equipment shows this equipment belonging to **Transmission & Distribution**.

This **Category** information is also critical to creating a correct Problem Statement.

16. Click  to return to the main Notification window.

Continued on the next page.

Coding the E1 Notification

Now that the correct TDBU Structure has been identified, the coding that will create the Problem Statement must be added.

Before you select the TDBU Equipment codes you need to understand how TDBU assigns its equipment codes.

- In [Step 14](#), you identified the **Object type** as **ED_POLE**
- In [Step 15](#) you identified the TDBU Pole as belonging to the **Equipment Category of Transmission & Distribution**

Remember this information; you will need it shortly.

17. In the Subject region of the **General Data** tab, click in the **Coding** field and then click  to the right of the **Coding** field.

| TDBU Equipment Code Identifiers | |
|---------------------------------|-------------------------------|
| ED | Distribution Use Only |
| EE | All TDBU Use |
| ES | Substation Use Only |
| ET | Transmission Use Only |
| EZ | Transmission/Distribution Use |

18. Select **EZ-ELEV** after the **Catalog Selection Window** appears.

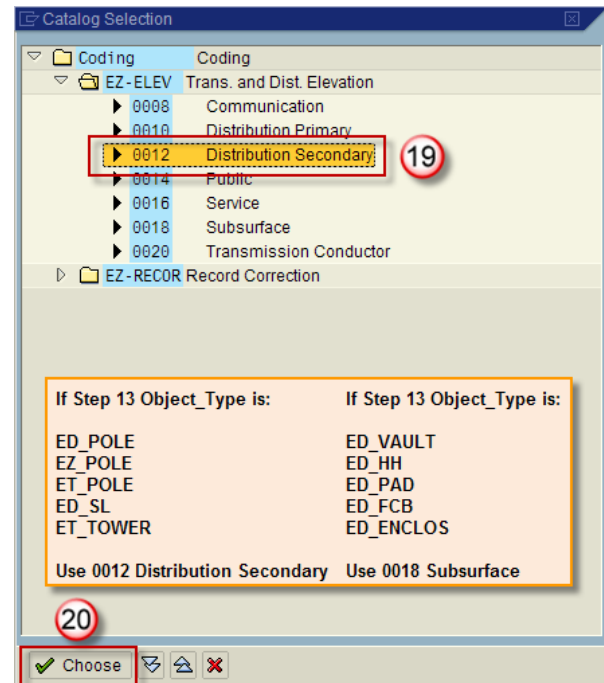

Remember that [Step 15](#) showed the TDBU Pole as belonging to Category *Transmission & Distribution*.

Continued on the next page.

19. Click  to the left of EZ-ELEV to display the submenu and then double-click on item **0012 Distribution Secondary** to select it.

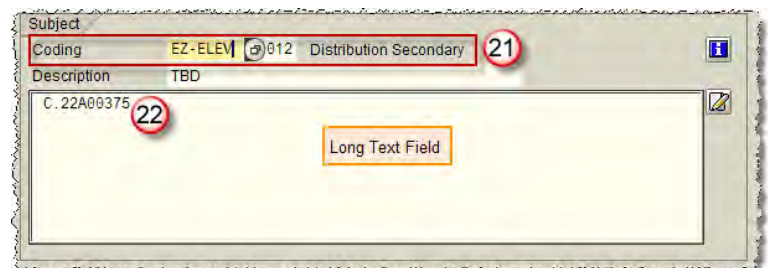

Telecom Radios are always located on either TDBU Distribution Secondary Equipment (code 0012) or TDBU Subsurface Equipment (code 0018.) The **General Data Window**, shown in [Step 14](#) will help identify which code to use. (See the [Problem Statement Matrix](#) on page 3 for more information.)

20. Click .
21. Confirm that **EZ-ELEV** and code **0012** are added to the **Subject** region in the **Coding** field, as shown.

The **Description** field is automatically updated with the information entered in [Step 5](#). This will change again when it is automatically updated with the Problem Statement after the E1 Notification is completed.

22. Enter the Telecom FLOC for the Radio into the **Long Text** field below the **Description** field to ensure the Radio information is captured.

Continued on the next page.

23. Scroll down to the **Item Area** of the screen, click in the **Object part** field, and then click  to add the **Object part** coding.

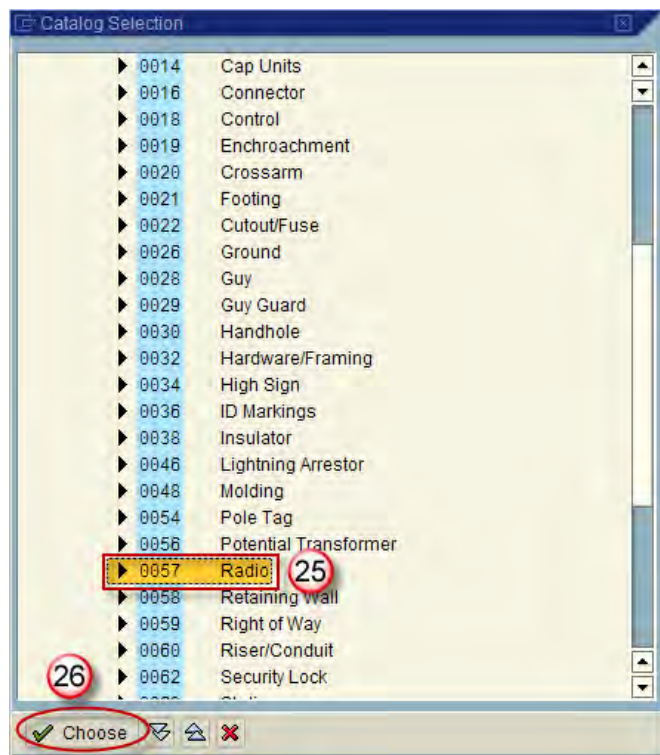

24. After the **Catalog Selection** Window appears, click  to the left of **ED-POLE** to show the available **Object parts** menu.

Remember in [Step 13](#) that this TDBU Equipment Pole is **Object type = ED-POLE**.

25. After the **Catalog Selection** Window expands to reveal a large number of components attached to the Pole, scroll down to select code **0057 Radio**.

26. Click .

This is the **ONLY** option that will work with the E1 Notifications for Telecom Problem Statements. Selecting any other Component will cause an E1 Notification creation error. (See [the Problem Statement Matrix](#) on page 3 for more information.)

Continued on the next page.

Check that the **Object Part** coding from Step 25 is being displayed correctly. If not, repeat Steps 24 to 26.

27. Enter the **Damage** coding by clicking in the **Damage** field and then clicking  to open the menu.

28. After the **Catalog Selection** Window expands to reveal a large number of damage reasons for the Pole, scroll down to select code **0049 Netcomm**.

29. Click .

This is the **ONLY** option that will work with E1 Notifications for Telecom Problem Statements. Selecting any other Damage reason will cause an E1 Notification creation error. (See the [Problem Statement Matrix](#) on page 3 for more information.)

30. Verify that the Item area in the E1 Notification you are creating looks like this.

If the **Item** region of your E1 Notification screen does not look like this, the Notification cannot be created.

Continued on the next page.

31. Scroll back up to the top of the **Notification** Window and click on the **Tasks** Tab to complete the last piece of coding.

The screenshot shows the 'Create PM Notification: Repair Notification' window. The 'Tasks' tab is selected and circled in red. A red circle with the number 31 is next to the 'Tasks' tab. The window displays the following information:

- Notification: %00000000001 E1 TBD
- Status: OSNO INIT
- Order:
- Reference object:
 - Functional loc: 0H-2278990E POLE-DISTRIBUTION 2278990E Location
 - Equipment: 200615650 POLE-DISTRIBUTION 2278990E

32. Add an **Action** code by clicking in the **Code gr** field and then clicking  to open the menu.

An **Action** code is the last piece of the Problem Statement. It tells the TDBU Apparatus Field Crew what they are supposed to do to the equipment. (See the [Problem Statement Matrix](#) on page 3 for more information.)

The screenshot shows the 'Create PM Notification: Repair Notification' window, specifically the 'Tasks' tab. The 'Code gr' field is highlighted in yellow, and the 'Task code text' field is circled in red. A red circle with the number 32 is next to the 'Task code text' field. The window displays the following information:

- Notification: %00000000001 E1 TBD
- Status: OSNO INIT
- Order:
- Reference object:
 - Functional loc: 0H-2278990E POLE-DISTRIBUTION 2278990E Location
 - Equipment: 200615650 POLE-DISTRIBUTION 2278990E

Continued on the next page.

33. After the **Catalog Selection** Window expands to reveal a large number of **Action** choices for the Telecom Radio on the TDBU Pole, scroll down to select code **0028 Inspect**.

34. Click .

You may **ONLY** select one of the following:

0028 Inspect
0030 Install
0042 Remove
0046 Replace

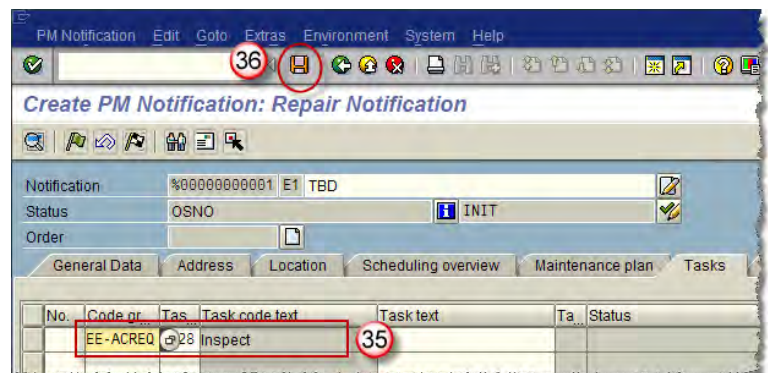

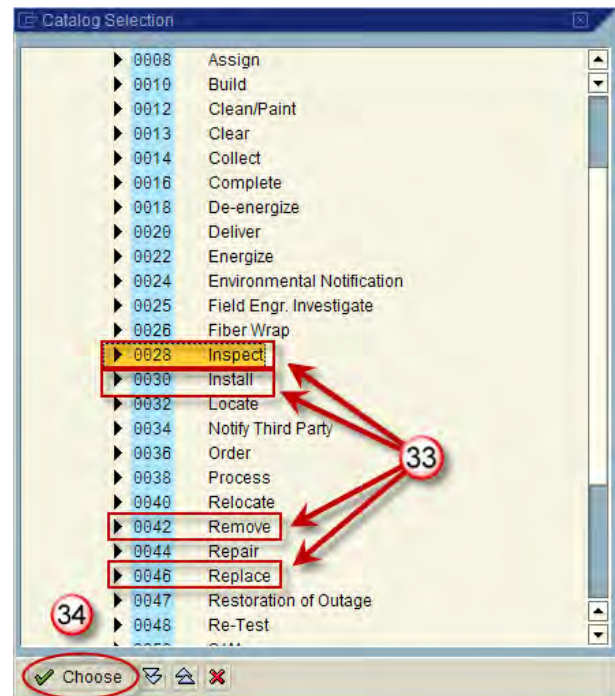

These are the **ONLY** options that will work with the E1 Notifications for Telecom Problem Statements. Selecting any other Actions will cause an E1 Notification creation error.

35. Confirm that the **Action** code has been entered correctly.
36. Click  to save the E1 Notification for Telecom.

A Notification Number will be displayed in the lower left corner of the screen for successfully completed Notifications.

Write this number down, you will need it to verify completion of the Notification.

Continued on the next page.

If the Notification contains incorrect information, an **error message** will be displayed in the lower left corner of the Notification Window.

This error is most likely caused by coding errors when building the Problem Statement Components in [Steps 17](#) through 34. Go back and fix the error(s) to create a successful E1 Notification. (See the [Problem Statement Matrix](#) on page 3 for more information.)

A horizontal banner with a light beige background and a dark border. On the left side, there is a red square icon containing a white 'X'. To the right of the icon, the text "Problem Statement not found. Update coding and save." is written in a dark, sans-serif font.

Display Notification

1. To display a Notification, enter transaction code **IW23** and click

2. Enter the Notification number in the **Notification** field.

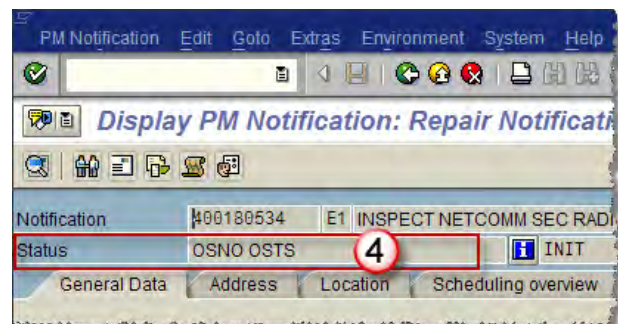

3. Click

You may also click to the right of the **Notification** field to search for the Notification number.

The E1 Notification displays.

4. The current status of the E1 Notification is displayed directly below the **Notification** number and **Problem Statement**. (See Figure 4.)

The adjacent table explains the current status of the Notification.

| System Status | Definition | Denotes |
|---------------|--------------------------|--|
| OSNO | Outstanding Notification | Has not been completed |
| NOPR | Notification in Process | Has not been set to complete, may have outstanding tasks |
| NOCO | Notification Completed | All work/tasks have been completed, notification set to complete |
| TSCO | Task Completed | The task has been completed |
| OSTS | Task Outstanding | The task has not been completed |
| ATCO | All Tasks Completed | All the tasks have been completed, the notification can be completed |

Figure 4: Notification Status Definition Table

Print a Notification

1. To print a Notification, enter transaction code **IW22** (if you need to change something before you print) or **IW23** (display only) and click .
2. Enter the Notification number in the Notification field.
3. Click .

You may also click  to the right of the **Notification** field to search for the Notification number.

4. After the Notification Screen displays, click on the menu path **PM Notification/Maintenance notification > Print > Notification**

Be sure you have a printer configured.
(See Work Instructions 3-F-005-040-090-IW22 Print Substation Notifications for help setting up your default printer.)

Continued on the next page.

The **Select Shop Papers** Window appears with all available reports automatically highlighted.

5. Click  to the left of any Notification report that you do not wish to print, or go straight to Step 6 to print everything.
6. Click  **Print/Fax** to print the Notification report(s) to your default printer.

After your Notification reports have been printed, you will receive a message in the lower left corner of the screen.

Change an E1 Notification

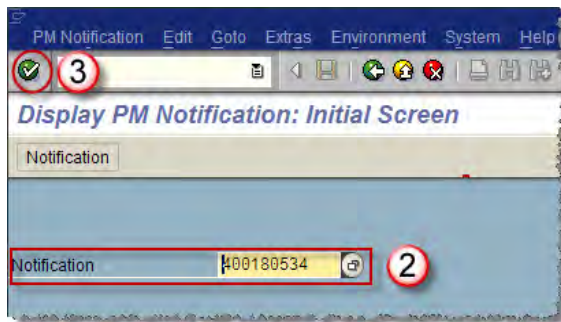

An E1 Notification specified an Action of “**Inspect**” to have the Field Team inspect the Telecom Radio. Change the Notification to add some information to the Short Text and Long Text fields for the Action Task.

1. To Change a Notification, enter Transaction Code IW22 and click

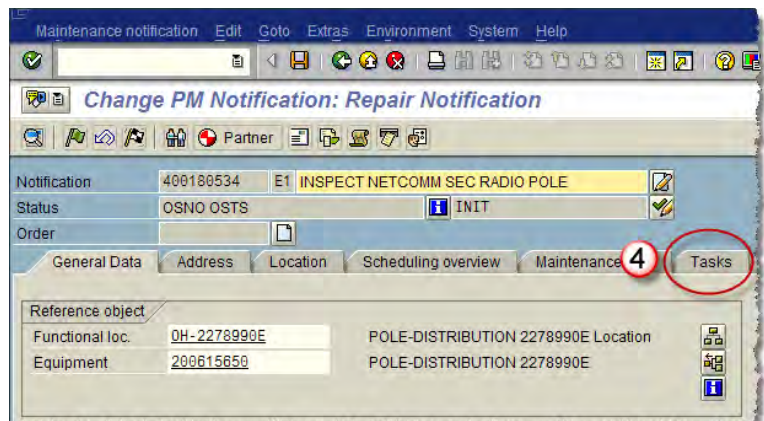

2. Enter the Notification number in the **Notification** field.

3. Click

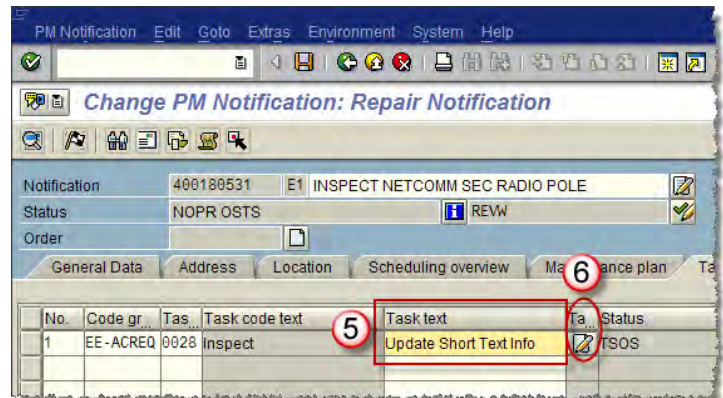

You may also click  to the right of the **Notification** field to search for the Notification number.

4. Click on the **Tasks** Tab.

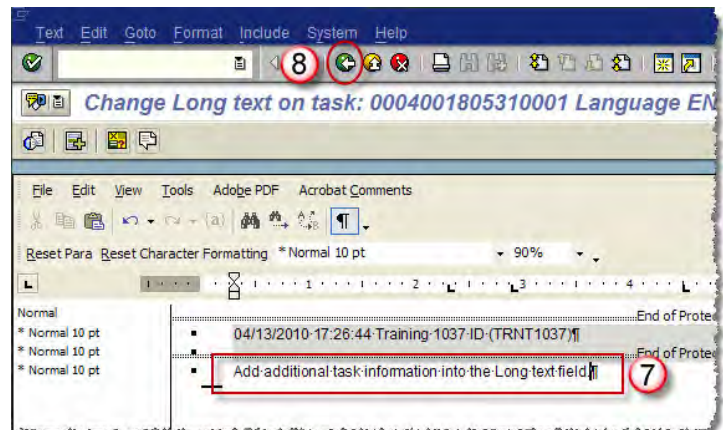

Continued on the next page.

5. Update the task's **Short Task text** field.
6. Click  to use the task's Long Text file to add additional information that will not fit into the **Short Task text** field

7. Enter the additional task information as required.
8. When finished, click  to return to the Task Tab.

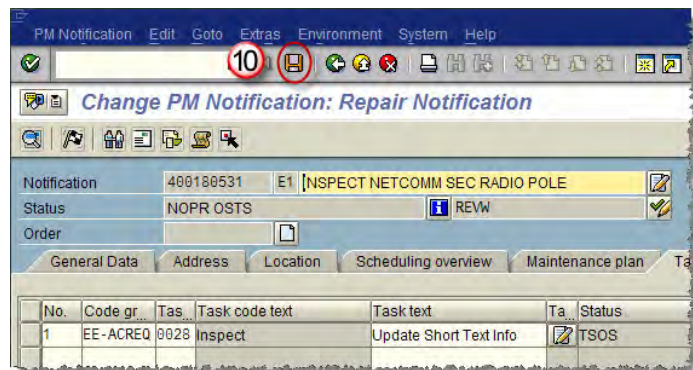

9. When prompted, click  to save the updated text.

Continued on the next page.

10. Click  to save the updated E1 Notification.

After your Notification changes have been saved, you will receive a message in the lower left corner of the screen.

If the Notification contains incorrect information, an **error message** will be displayed in the lower left corner of the Notification Window.

If your E1 Notification activities include Gatekeeping requirements, more information on the E1 Gatekeeping Process, see Work Instructions 3-F-005-030-010-IW22 Change E1 Notification – Gatekeeping Process.

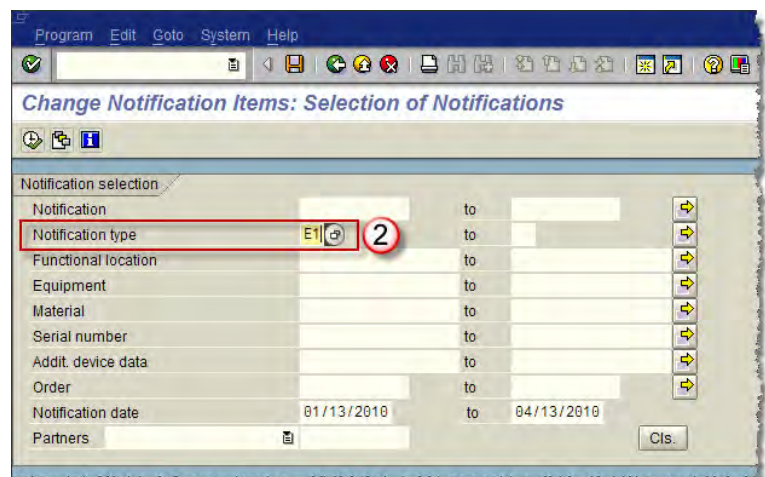

Search for a Notification

1. To Search for a Notification, enter Transaction Code IW68 (Change) or IW69 (Display) and click .

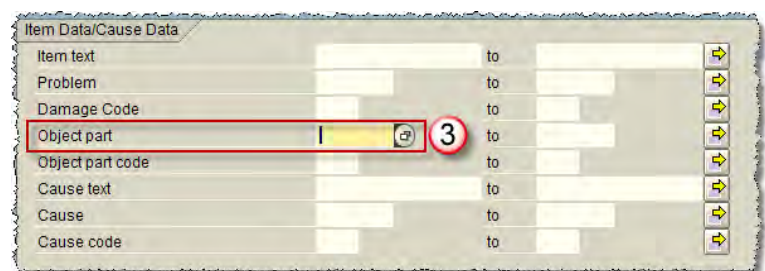

IW68/IW69 is used in lieu of IW28 to search for Notifications because this allows the addition of OBJECT_TYPE to the search criteria to narrow the results to only Telecom Notifications.

2. After the **Change/Display Notification Items: Selection of Notifications** screen appears, enter E1 in the **Notification type** field.

3. Scroll down to the **Item Data/Cause Data** region of the screen, place the cursor in the **Object part** field and click .

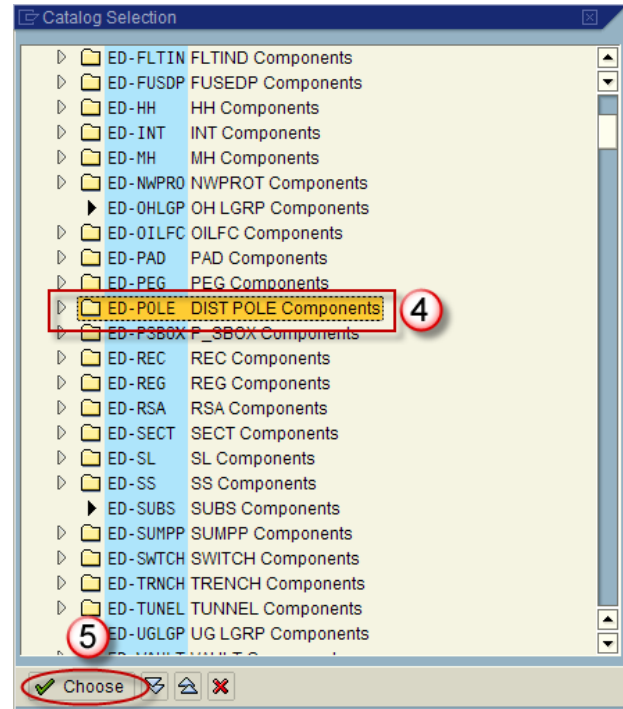

Continued on the next page.

- After the **Catalog Selection** window opens, select **ED-POLE DIST POLE Components**.

Do **NOT** click  to the left of **ED-POLE** to display the submenu choices. This search functions *only* with the top level selections.

- Click .

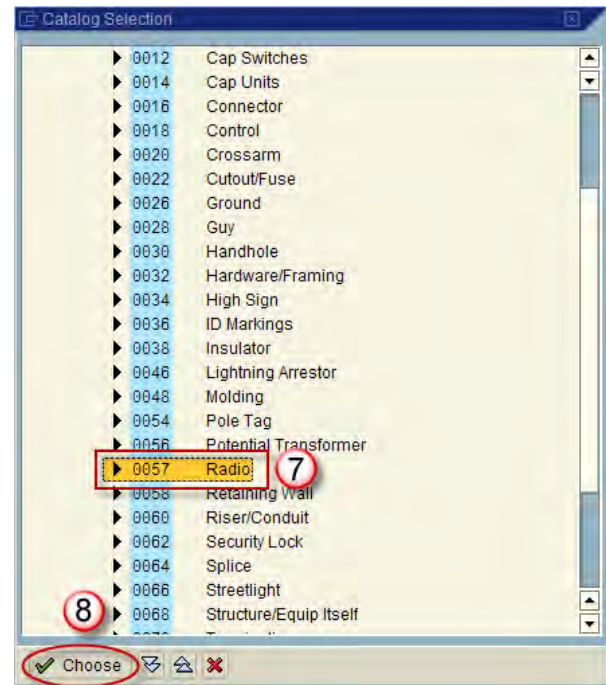

- Next, place the cursor in the **Object part code** field, and click .

Continued on the next page.

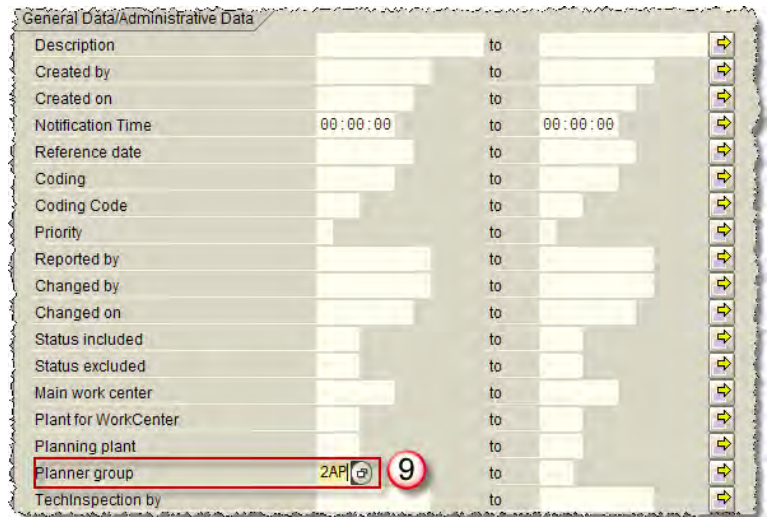

7. After the **Catalog Selection** window opens, select **0057 Radio**.
8. Click .

9. Scroll down to the **General Data/Administrative Data** region of the screen and enter **2AP** in the **Planner group** field.

If you need to search for the **Planner group**, click in the empty field and click  and browse the submenu for **1200 2AP Apparatus PIng**.

Continued on the next page.

10. Click  to begin the search.

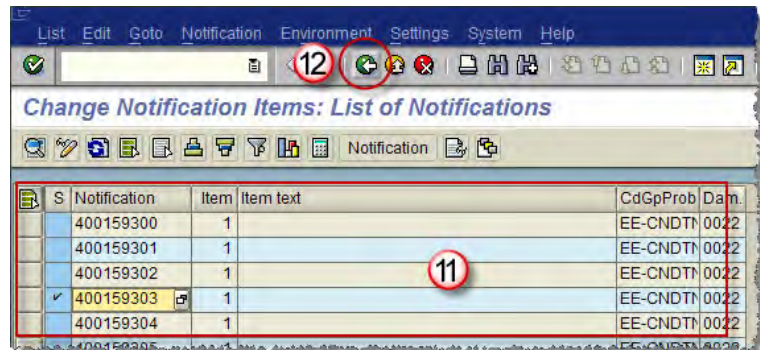

For more information on searching Notifications, see Work Instructions 3-F-005-090-015-IW69 Notification List/Edit.

The **Display Notification Items: List of Notifications** screen appears showing all Notifications matching your search criteria.

11. Double-click on a Notification number to display the Notification. Notice that each displayed Notification receives a  to help you keep track of which ones you have already viewed.

12. Click  twice to exit.

Cancel a Notification

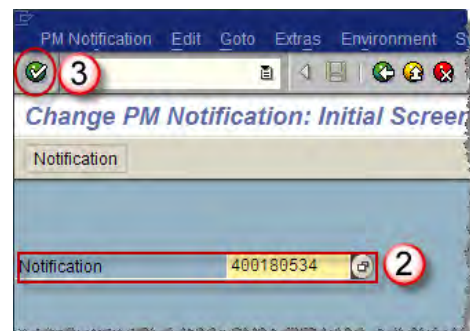

1. To Cancel a duplication Notification when you know the number, enter Transaction Code IW22 and click .

If you do not know the notification number to be deleted, use IW28 to allow you to search for the Notification.

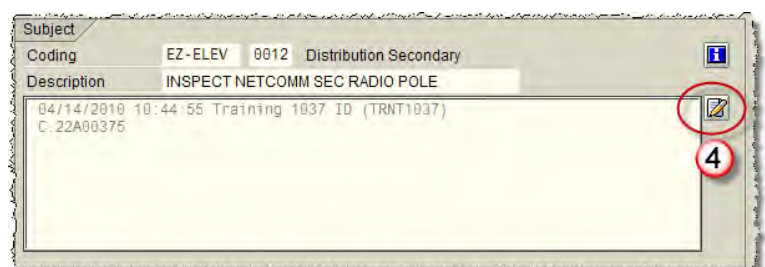

See Work Instruction 3-F-005-050-020-IW22 Notification Cancellation for more details on canceling duplicate notifications.

2. Enter the Notification number in the **Notification** field.
3. Click .

4. Click  to enter cancellation information in the **Long Text** field.

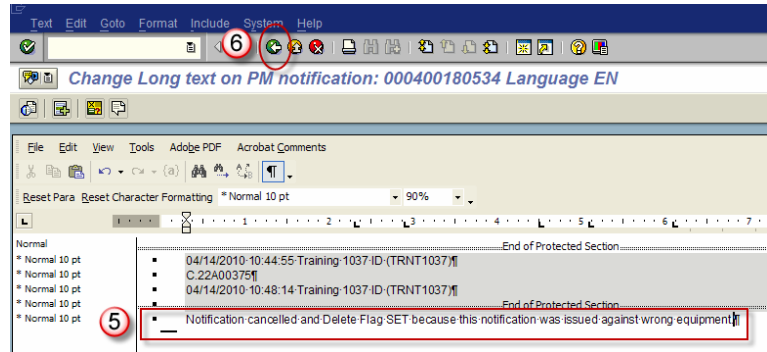

Continued on the next page.

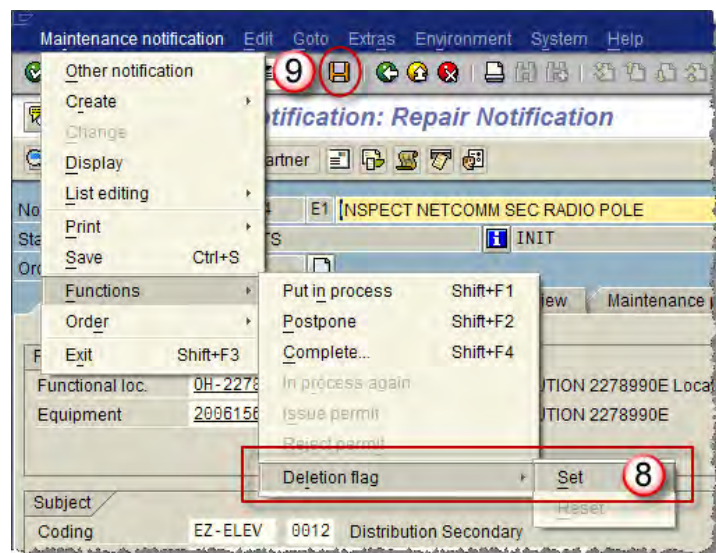

5. After the **Long Text** field is displayed, enter a description explaining why the Notification is being cancelled, such as:

"Notification cancelled and Delete Flag SET because this notification was issued against wrong equipment."

6. Click  to return to the **Change PM Notification** screen.
7. Click **Yes** to save your changes.

8. Go to **Maintenance notification > Functions > Deletion flag > Set** to set the Deletion Flag.
9. Click  to save the changes in the notification.

The changes are saved and you will receive a message that the changes have been completed.

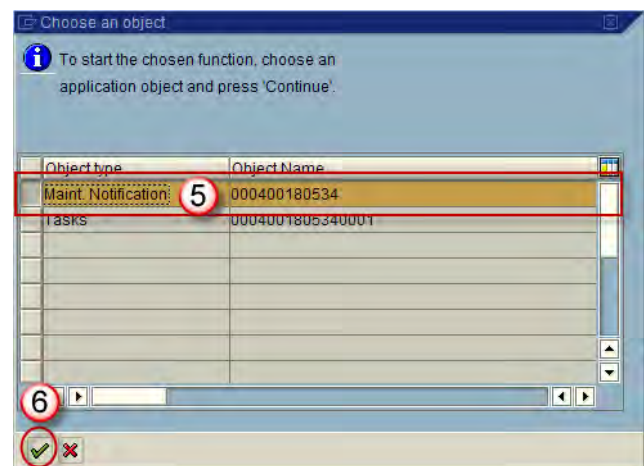

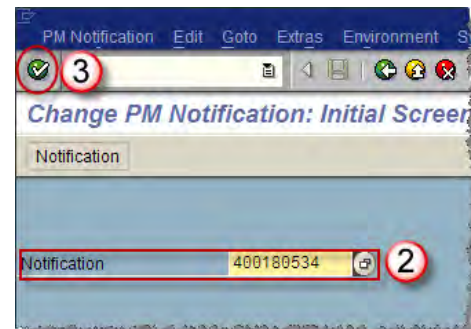

Notification Attachments

1. To attach a file to a Notification, enter Transaction Code IW22 and click .
2. Enter the Notification number in the Notification field.
3. Click .
4. After the **Display PM Notifications: Repair Notification** screen appears, click  to attach a file to the notification.
5. The **Choose an object** screen appears. Click  to the left of the Notification object type that you wish to add the attachment to.
6. Click  to accept your selection and return to the previous screen.

Typically, files are attached to the Notification object. However, if the attachment is something specific to the Task, it should be attached directly to the Task object.

Continued on the next page.

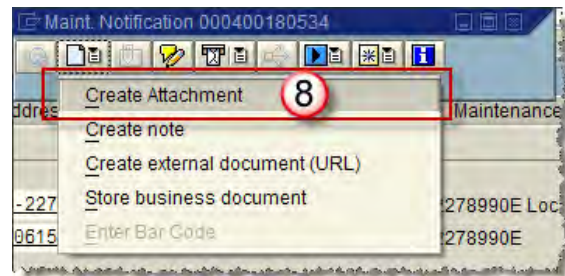

7. After the **Maint. Notification** screen displays, click  to select the file to attach.

To discover what attachments currently exist on this E1 Notification, click . If this icon is greyed-out, nothing is currently attached to the Notification.

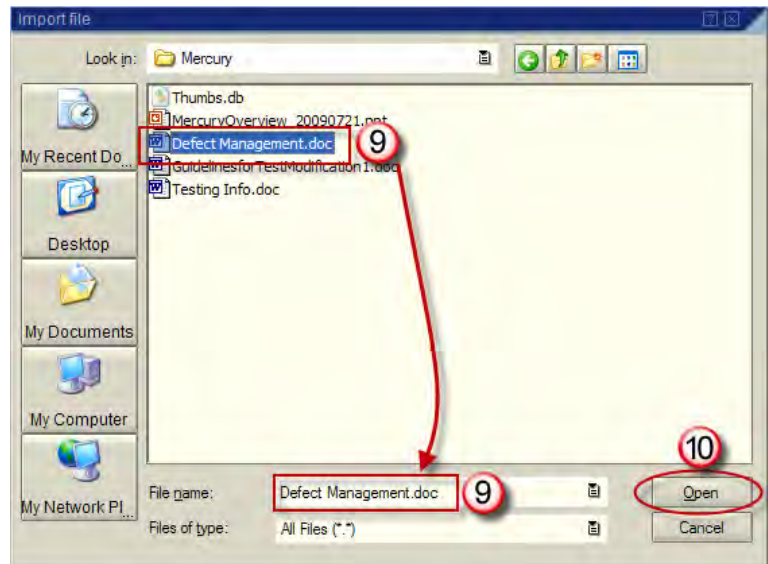

8. Select **Create Attachment** from the drop-down menu.

The **Import file** window appears.

9. Using standard Windows navigation, browse to the folder containing the document, spreadsheet, or graphic file you want to attach. Click on the file to highlight it.
10. Click .

Continued on the next page.

11. Click  in the upper right corner of the window to exit.

12. Click  to save the changes in the Notification.

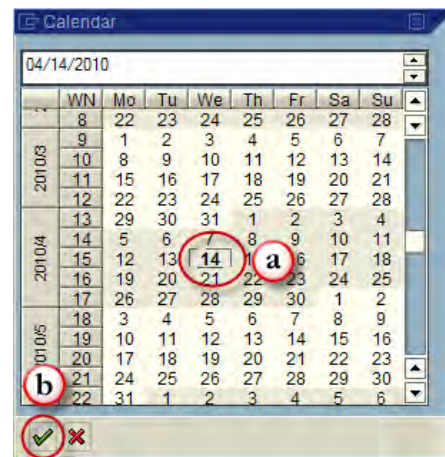

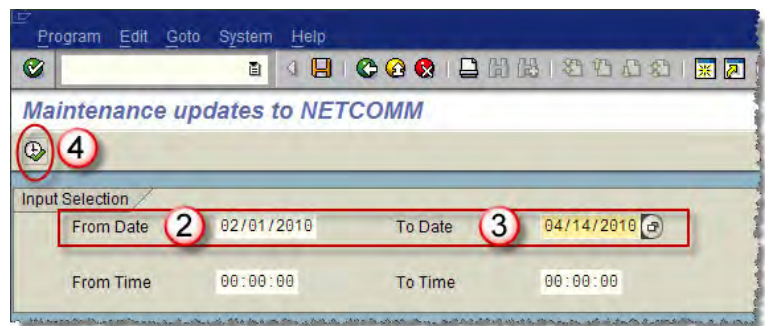

The system displays a message that the changes have been saved.

Transferring Telecom Notifications

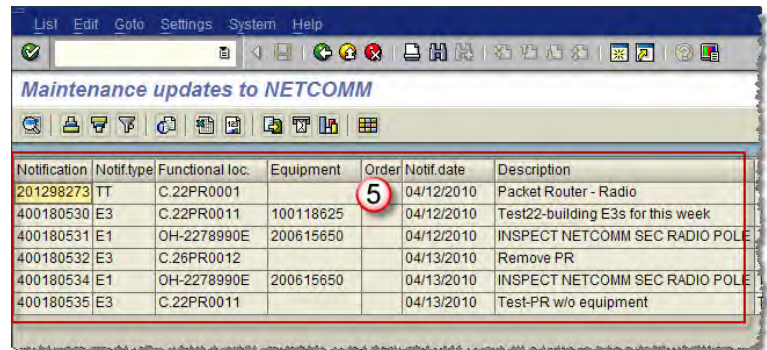

Telecom Notifications can be transferred from SAP to Netcomm Radio Maintenance System (NCMM) by the EAM – IT/Telecom Interface Maintainer role. You must ensure that you have been assigned that role before you try to transfer Telecom Notifications using this procedure.

1. To transfer Telecom Notifications from SAP to NCMM, enter transaction code **ZPMNCMFL** and click .
2. After the **Maintenance updates to Netcomm** screen appears, enter the earliest date for the desired period in the **From Date** field in MM/DD/YYYY format.
3. Enter the last date of the desired period in the **To Date** field in MM/DD/YYYY format.
 - a. If desired, click in the **From Date** field and/or the **To Date** field and then click  to access a date calendar to select a date from.
 - b. Click  to enter the selected date into the field.
4. Click  to start the transfer of Telecom Notifications.

Continued on the next page.

5. A list of Telecom Notifications that have been transferred from SAP to NCMM will be displayed.

| Notification | Notif.type | Functional loc. | Equipment | Order | Notif.date | Description |
|--------------|------------|-----------------|-----------|-------|------------|-----------------------------------|
| 201298273 | TT | C.22PR0001 | | | 04/12/2010 | Packet Router - Radio |
| 400180530 | E3 | C.22PR0011 | 100118625 | | 04/12/2010 | Test22-building E3s for this week |
| 400180531 | E1 | OH-2278990E | 200615650 | | 04/12/2010 | INSPECT NETCOMM SEC RADIO POLE |
| 400180532 | E3 | C.26PR0012 | | | 04/13/2010 | Remove PR |
| 400180534 | E1 | OH-2278990E | 200615650 | | 04/13/2010 | INSPECT NETCOMM SEC RADIO POLE |
| 400180535 | E3 | C.22PR0011 | | | 04/13/2010 | Test-PR w/o equipment |

6. A message confirming the successful transfer of the Notifications to the Proxy is displayed in the lower left corner of the screen.
7. If there are no Telecom Notifications created during the period of time specified in Steps 2 and 3, an error message will display in the lower left corner of the screen.
8. If the Telecom Notifications failed to transfer, an error message will display in the lower left corner of the screen.
9. Click  to Exit.

 Notifications successfully sent to proxy

 Notifications not found for the given selection criteria

 Sending Notifications to the proxy failed
